Anupam Chugh

Apple-platform engineer · app builder · technical writer

India · anupam.chugh@gmail.com · Portfolio & blog · Work gallery · GitHub · LinkedIn

ABOUT

I build apps, tools and products. My background is in Android and Apple platforms. Through Alcor, my independent app studio, I take ideas from prototypes to apps people can use. As a trader, I also build tools for clearer market research and more deliberate decisions. I have led editorial and engineering teams and worked across product, web and machine learning.

EXPERIENCE

Independent product builder · Alcor (name since 2026)

2024–present

- Build Apple apps from idea to release. Wearover explores outfit restyling from a photo; Breakline helps people explore movement in their own clips.
- Explore products including Orbits for making plans, Glint for market research, and creative tools for video and phone workflows. Released features and prototypes are labelled separately in my gallery.

Managing Editor · Better Programming

2021–2023

- Led editorial work with a small team; mentored engineers and writers as they shaped ideas and found readers. The publication reached 151 million lifetime views.
- Improved the editorial workflow and built MediumRSS to find writers through topic feeds. Started Coffee Bytes to put other writers' work in front of readers.

Mobile Developer · Aged Care Decisions

2020–2021

- Built adaptable iOS and Android experiences for aged-care services, using a shared app that different teams could configure.

Android Team Lead & iOS Developer · Agricx

2018–2019

- Led and mentored the Android team and connected web and machine-learning work. Built the first iOS camera app for crop inspection, using OpenCV and AVFoundation to count and grade samples on device. See the work →

Lead Android Developer · MOBEY

2015–2017

- Built customer and driver Android apps for a delivery service, from food and alcohol orders to delivery tracking. Also redesigned the iOS apps. See the work →

Android Developer & Technical Writer · JournalDev

2015–2019

- Built the Android app and wrote tutorials on Android, Java and Kotlin. I learned by making things and explaining how they worked.

TOOLS & EDUCATION

Swift · SwiftUI · iOS · macOS · Android · Vision · Core ML · AVFoundation · OpenCV · prototyping · technical writing · mentoring

B.E. Computer Science · Birla Institute of Technology and Science · 2011–2015

Selected work

Apps, tools, and experiments. Follow the links for screenshots, recordings, and context.

APPLE APPS

Wearover · restyling from a photo

On the App Store

Choose a photo and explore a different outfit. Built around Apple imaging and generation tools, with attention to keeping the person's face protected. View app →

Breakline · movement in your own clips

On the App Store

Built Breakline to explore movement in surf videos. Developing gym set analysis and a humanoid robot that replays a person's movement from video; these features are in testing. View app →

Orbits · from an idea to a plan

Independent project

A planning app exploring how people turn an outing idea into something they can do together. Explore the gallery →

Contour Lab · vision experiments

Open source

An exploration of counting and measurement from photos using Apple's Vision framework and RealityKit. See the work →

Screen Room & Rifflet · Apple apps

Selected work

Screen Room explores viewing recaps; Rifflet experiments with playing piano through hand gestures. See the work →

TOOLS AND EXPERIMENTS

Glint & TradeShot · market research

In development

I started TradeShot and Glint to make my own trading more deliberate and less impulsive. The developing market-information delivery system brings scans, charts, explanations and alerts together, so a trader can review context before acting. TradeShot →

MacItWork · Macs working together

Independent project

A project exploring how Macs communicate and share work. The larger goal is coordinated jobs across machines; agent-session handoffs remain planned work.

Reel Studio & Phone Studio · creative workflows

Experiments

Explore ways to work with phone media and turn source material into editable video. The concepts and prototypes are works in progress.

Agent coordination · bounded workflows

Experiments

Explore how a coordinator can assign work to existing Codex sessions and keep ownership, review, and evidence clear across projects. This is a workflow, not a claim of autonomous delivery.

CHUGHGPT · PERSONAL AGENTIC TOOLS

A developing personal toolkit for social media, blog and work workflows, exploring how agents and connected tools can support the work.

OPEN SOURCE & WRITING

iowncode · A collection of Apple-platform examples and tutorials across SwiftUI, Vision and Core ML, shared with the developer community. VisionCreditScan uses rectangle detection and OCR; Vision Hand Pose explores touch-free interaction.

I write tutorials, analysis and satire. My personal Medium writing has reached over one million views, as noted on my site. Read technology and product writing on Big Tech and Medium, and explain Apple frameworks on iOSDevie. More essays and project stories are on my blog.

Outside work · Writing and surfing.
